

Project Tracker

User Role Manual and System Overview

1. System Overview

Project Tracker is a role-based system for tracking participant or participant progress. It uses Supabase as the backend for authentication, database management, and row-level security to enforce data visibility based on each user's permissions.

The main modules include Login, Update Password, Projects, Dashboard, Update Status, Tickets, Participant Status, Admin, Admin Access, Create Project, and Project Settings.

The system also includes back-office capabilities such as automatic participant account creation from CSV files, automatic participant code generation, overall status calculation from project steps, and email notifications when tickets are opened or updated.

2. User Permission Structure

2.1 System Role

Role	Primary Access Rights
Admin	Can view and manage the entire system, including projects, users, access rights, and all admin-only pages.
Internal	Can work on projects where they are members, view dashboards, open and reply to tickets, and update participant status.
Client	Can access projects they have been assigned to, view dashboards and project tickets, but cannot use status update or admin menus.
Participant	Can only view their own status page, track their progress, and open or reply to their own tickets.

2.2 Project Member Role

In addition to system roles, the system also supports project-level roles in the `project_members` table: admin, editor, and viewer. These roles control permissions within each individual project.

- viewer is suitable for users who mainly need viewing access, such as clients or participants linked to a project.
- editor is suitable for users who need to edit data or update work, such as internal users or admins working directly on a project.
- admin at the project level is intended for deeper project administration, especially when the organization wants dedicated project managers.

3. Summary of Functions by Role

Role	Available Functions
Admin	Access every page in the system, create new projects, configure projects, manage user access, preview the participant view, view dashboards, export CSV/XLSX, open and reply to tickets, and update participant status.
Internal	Access projects where they are members, view dashboards, use Update Status, open and reply to tickets, and view participant data within permitted projects.
Client	Access projects where they are members, view dashboards, and view or reply to tickets within the permitted project scope.
Participant	View their own status, track the progress of each step, open a Request Support ticket, and reply to their own tickets.

4. Screen-by-Screen User Guide

4.1 Login

The Login page is used to enter an email address and password to access the system.

After a successful login, participants are redirected directly to the participant-status page, while other roles are redirected to the projects page.

If a user does not yet have an account, they must contact the system administrator to request access.

The screenshot displays the login interface for 'Project Tracker'. On the left, a light blue sidebar contains the text 'Project Tracker Workspace' and the main heading 'Project Tracker.' followed by a description: 'Access dashboards, update candidate status, and manage project tickets in one place with role-based access.' The right panel is white and features a 'Welcome back' message, a 'Sign in' heading, and a prompt to 'Enter your account details to continue.' Below this are input fields for 'Email' (containing 'name@company.com') and 'Password' (with a placeholder 'Enter your password' and a toggle icon). A 'Forgot password?' link is positioned to the right of the password field. A dark blue 'Sign in' button is centered below the inputs. At the bottom, a note states: 'If you do not have an account yet, please contact your administrator.'

4.2 Update Password

This page is used by users who arrive via a password reset link to set a new password.

The system first verifies that the reset link is still valid, then prompts the user to enter and confirm a new password, with a minimum length requirement of 8 characters.

After the password is updated successfully, the system redirects the user back to the login page.

1. Put email address and click Forgot password? If successful, the green statement will appear saying Password reset email sent. Please check your inbox.

The image shows a web interface for 'Project Tracker'. On the left, a sidebar contains the text 'Project Tracker Workspace' and a large heading 'Project Tracker.' followed by a description: 'Access dashboards, update candidate status, and manage project tickets in one place with role-based access.' The main area on the right is titled 'Sign in' with a 'Welcome back' message. It includes a form with an 'Email' field containing 'jiradech.onsuratam@mentisglobal.com' and a 'Password' field with the placeholder 'Enter your password'. A 'Forgot password?' link is located below the password field. A dark blue 'Sign in' button is positioned below the form. A green message box states 'Password reset email sent. Please check your inbox.' At the bottom, a note says 'If you do not have an account yet, please contact your administrator.'

2. Check your mailbox and click the Reset Password and follow the link to the update password page.

The image shows a web interface for 'Project Tracker Security'. The main heading is 'Set a new password', followed by instructions: 'Enter your new password below. After the password is updated successfully, you will be redirected to the sign-in page.' The form has two fields: 'New Password' with the placeholder 'Enter your new password' and 'Confirm Password' with the placeholder 'Re-enter your new password'. A note below the fields states 'Password must be at least 8 characters.' A blue 'Update password' button is at the bottom. A message below the button says 'Reset link verified. You can now set a new password.' and a 'Back to sign in' link is at the very bottom.

3. Check your mailbox and click the Reset Password and follow the link to the update password page.

Put your new password and if successful, will be redirected to login page and the green statement will appear Password updated successfully. Please sign in with your new password.

4.3 Projects

The Projects page is the landing page after login for admins, internal users, and clients. It shows only the projects that the current user can access.

After selecting a project, the user can go to the Dashboard, Tickets, or other menus according to their permissions.

This page also serves as the primary project selector for the system and stores the selected project in the session for cross-page use.

4.4 Dashboard

The Dashboard shows an overview of participants in a project, such as total counts, status breakdowns, charts, and a participant table.

It includes view tabs for switching between the overview and the participant list.

It supports search, filtering by status, and exporting the list as CSV or XLSX.

From the dashboard, users can also open a new ticket for a selected participant.

The columns displayed on the dashboard are controlled by the project's field settings. Fields with show_in_dashboard turned off will not be shown.

4.5 Update Status

The Update Status page is used by internal users and admins to edit participant data and process status.

Main functions include selecting a participant, adding a new participant, editing the code, name, email, issue, decision, and updating step status with auto-save.

There is a table below for searching, filtering, showing inactive records, and adding participants from both the New Participant and Add Participant buttons.

The system supports deactivating participants instead of permanently deleting their records.

4.6 Tickets

The Tickets page is used to track and communicate requests or issues linked to a participant and project.

Users can search and filter tickets by priority, status, or keyword.

When a ticket is opened, the user can see the original message, reply thread, reply input area, and options to change status or priority based on permissions.

The system has four main priority levels: low, normal, high, and urgent.

When a reply is added or the status changes, the system can call an edge function to send email notifications to relevant users.

4.7 Participant Status

The Participant Status page is where participants view their own progress.

The page shows a summary of completed, in-progress, and remaining steps, as well as the overall status and the full step list.

Participants can click Request Support to open a new ticket and can also reply within existing tickets.

Admins can open this page in preview mode to view exactly what a participant sees. In this mode, the system shows an ADMIN PREVIEW banner at the top.

4.8 Admin

The Admin page is a shortcut and system overview page for administrators.

It includes shortcut buttons for the project list, dashboard, update status, create project, project settings, and admin access.

It also shows high-level KPIs such as the number of projects, users, memberships, and records.

It supports participant preview by allowing the admin to choose a project and participant and open the participant-status page in preview mode.

If a non-admin user enters this page, the system automatically redirects them back to Projects.

4.9 Admin Access

The Admin Access page is used to manage system-wide user permissions.

Administrators can search for users, change display names, update profiles.role, and manage project membership for each user.

They can add or remove project membership for internal users or clients and assign the project-level role of viewer or editor.

This page is suitable for onboarding new users, adjusting roles, or updating permissions when team assignments change.

4.10 Create Project

The Create Project page is a 5-step wizard for admins.

1. Project Info: Enter the project name, code prefix, description, start date, end date, and status.
2. Fields: Define project fields, select from the field library, add custom fields, set ordering, and define data types.
3. Members: Select internal users or clients who will access the project and assign their project-level roles.
4. Participants: Upload a CSV file containing name and email columns to create participants in batch. The system automatically generates a temporary password.
5. Review: Review the summary before creating the actual project.

The system uses draft auto-save in localStorage so the user can continue later if the page is closed.

4.11 Project Settings

The Project Settings page is used to modify an existing project. It is divided into four tabs: General, Fields, Members, and Participants.

General: Edit the project name, code prefix, description, start and end dates, and the active, draft, or archived status.

Fields: Change field names, field order, enable or disable fields, and control whether each field appears on the dashboard.

Members: View current members, change member roles, add new members, or remove members from the project.

Participants: Upload a CSV file later to add more participants. The system reuses existing accounts if they already exist or creates new ones automatically.

There is also an Archive Project button to hide the project from the project list while still allowing it to be restored later.

The screenshot shows the 'Leadership Assessment 2026 — Settings' page. The left sidebar contains the 'Mentis Project Hub' with links to Projects, Dashboard, Tickets (with a red notification badge), Update Status, Admin (highlighted), and Access. Below this is the 'Admin (admin)' section with a Logout link. The main content area has tabs for General, Fields (selected), Members, and Candidates. A 'Back to Admin' button is in the top right. The 'Fields' tab displays a list of fields with their names, IDs, and toggle switches for 'Dashboard' and 'Active' status. The fields are: Email (email), CBI Booking (cbi_booking), Assessments (assessments), Feedback Booking (feedback_booking), GCAT ID (gcat_id), GCAT Status (gcat_status), Hogan Assessment (hogan), Hogan Status (hogan_status), and LearnWorlds Registered (learnworlds).

6. Role-Based User Guide

6.1 Admin

1. Log in with an admin account.
2. Select a project from the Projects page or open the Admin page to use shortcut menus.
3. To create a new project, go to Create Project and complete the wizard.
4. To manage users, open Admin Access and search for the relevant user.
5. To monitor the overall picture, open Dashboard and export data when necessary.
6. To update participant status, open Update Status.
7. To view the participant experience, use Participant Preview from the Admin page.

6.2 Internal

8. Log in to the system.
9. Select the assigned project.
10. Open Dashboard to review the participant overview and filter the list that requires follow-up.
11. Open Update Status to edit participant step status, issue, or decision.
12. Use Tickets to follow up on questions or issues from participants or clients and reply within the thread.

6.3 Client

13. Log in to the system.
14. Select the project you have been granted access to.
15. Open Dashboard to review the overall participant progress.
16. Open Tickets to view requests, track status, and reply when needed.
17. If the required project is not visible, contact an admin to verify your membership.

6.4 Participant

18. Log in with your own account.
19. The system automatically opens the Participant Status page.
20. Review the overall status and each step from the same page.
21. If you have a question or issue, click Request Support.
22. If you already have an existing ticket, you can open it and reply in the thread.
23. If you cannot access the system or need to change your password, follow the organization's password reset process.

7. Automatic Functions and System Rules

- The system calculates the overall status from step fields within the project, so the dashboard and participant-status page automatically reflect the latest status.
- The Update Status page and several other parts of the system use auto-save to reduce repeated manual saving.
- When an admin imports participants from CSV, the system automatically creates the auth user, profile, record, email value, and project membership through the admin-create-user edge function.
- The ticket system calls the ticket-notify edge function to send email notifications to participants, clients, internal users, or admins depending on the event and the replying user.
- The system uses row-level security in the database to enforce actual data visibility, rather than relying only on hiding menu items on the interface.

8. Important Notes and Recommendations

- If an internal user or client does not have project membership, the system may redirect them away from project pages or may not show the expected data.
- Participants should not use internal menus because the system is designed for them to work primarily through the Participant Status page.
- Archiving a project hides it from the project list but does not permanently delete the data.
- CSV import must include name and email columns, and rows with invalid formatting are skipped or shown as errors in the preview.
- To show or hide a dashboard column, adjust Project Settings > Fields > show in dashboard.
